

Attention Lake George Anglers

WE NEED YOUR INPUT!

DEC Fisheries has maintained an active angler diary program on Lake George since 1973. Lake trout and landlocked salmon anglers are asked to record trip and catch information in diaries provided by the state. These data are invaluable for managing the lake's important salmonid fishery. New cooperators will be sent an angler diary cooperator decal. They will also receive an annual report summarizing their trip information which includes discussion of management options for the lake. If you plan on fishing Lake George in 2009 we need your input.

New for 2009, we will also be collecting data on bass, pike and pickerel in warmwater diaries. If you fish for bass or pike in Lake George and would like to be included in the warmwater program, please let us know and we will send you an additional diary.
